Molecular Imaging in Cardiovascular Diseases

- „ Evaluation of myocardial viability and ischemic memory
- „ Imaging of Cardiomyopathy
- „ Imaging of the cellular inflammatory response
- „ Evaluation of stem therapy

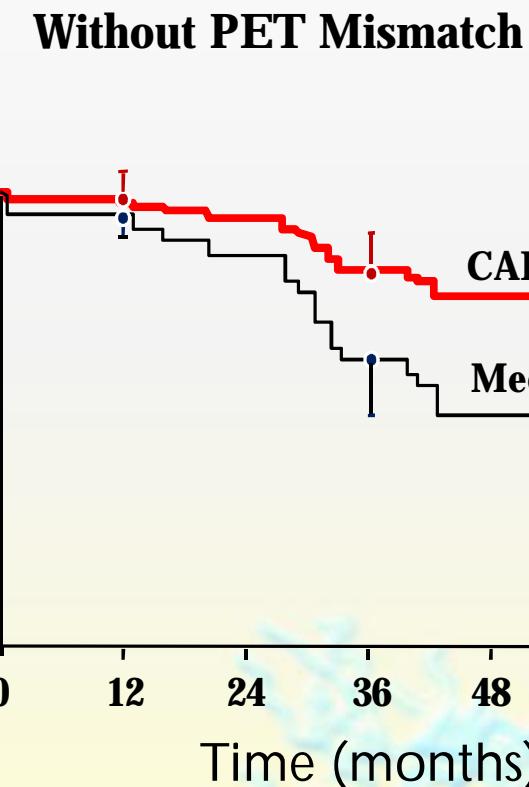

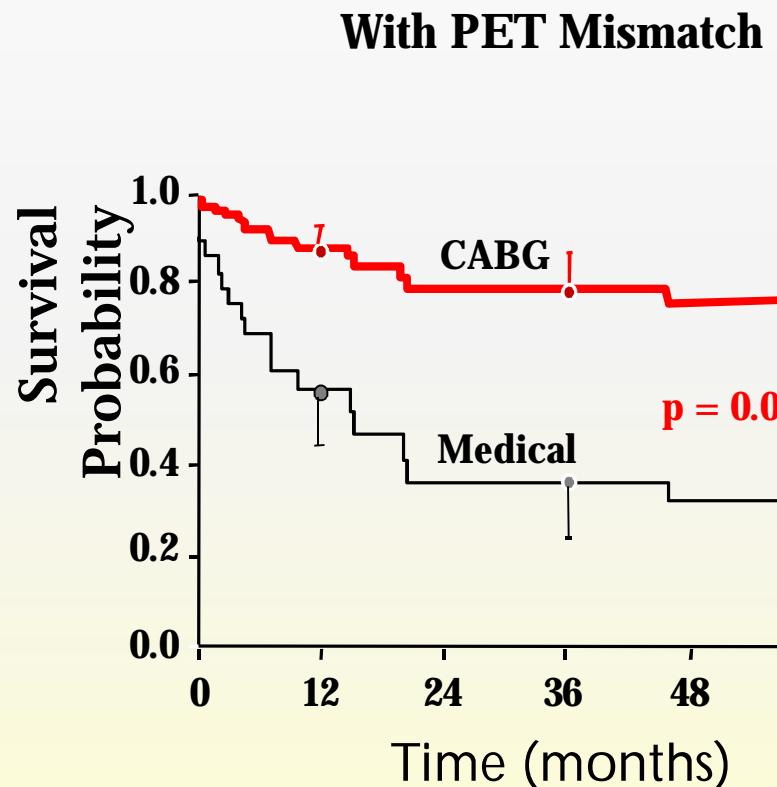

Imaging of Myocardial Viability

- ② PET
- ② MRI
- ② Thallium
- ② Dobutamine Echo

Survival by Viability and Treatment

93 Patients with Ischemic Cardiomyopathy and severely depressed left ventricular function

Di Carli et al, J Thor Cardiovasc Surg 1998; 116: 997

Perfusion and Metabolism Mismatch

Perfusion SPECT and FDG PET in HCM

Direct Imaging of Exercise-Induced Myocardial Ischemia in HCM

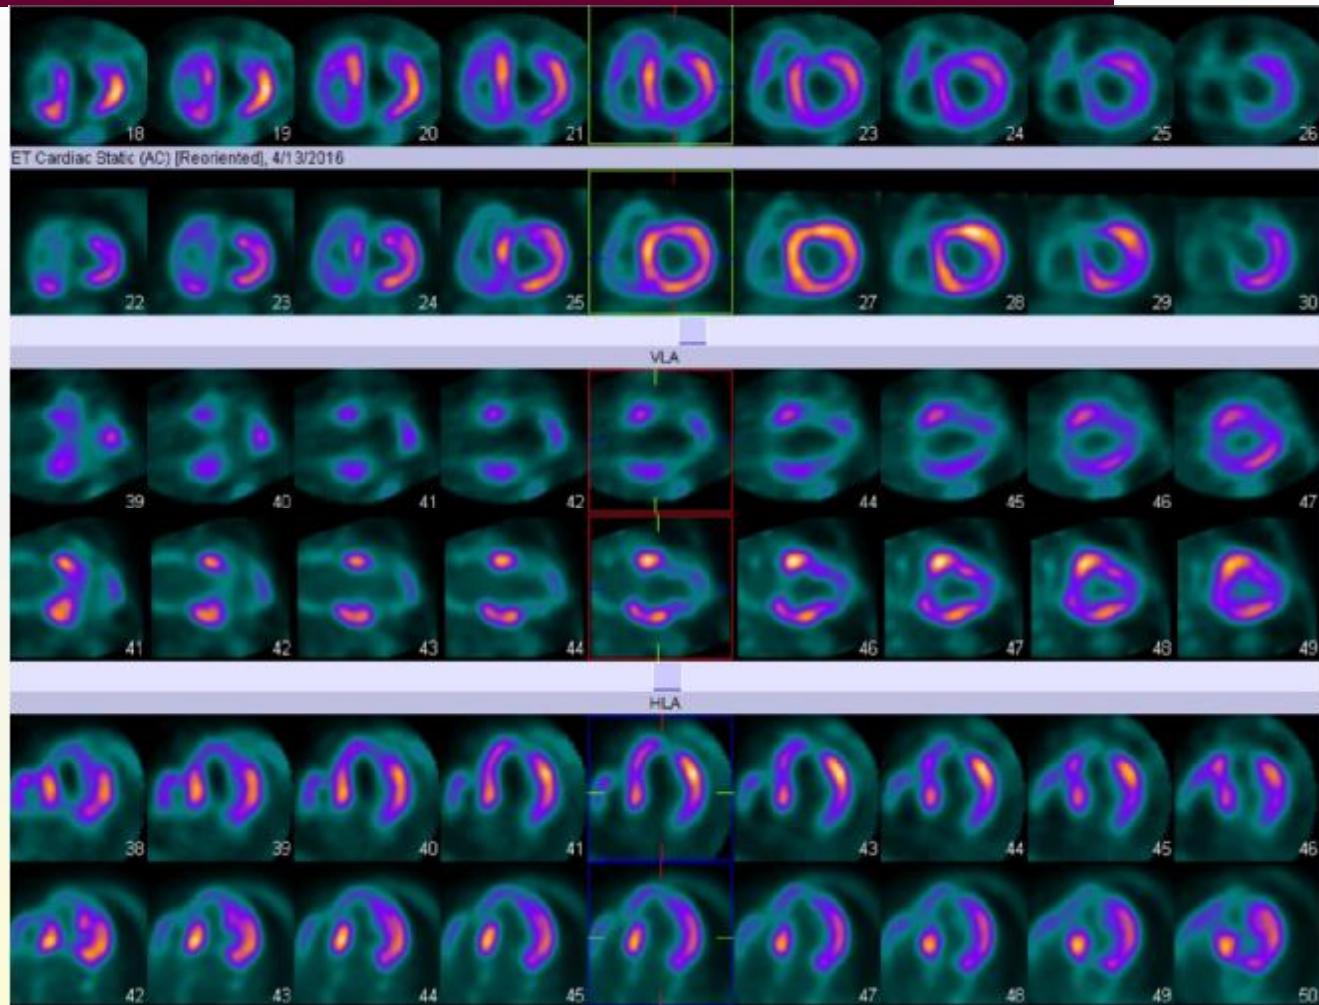

57-year-old man with a history of HCM

- Atypical chest pain and dyspnoea in the past 6 months
- Family history of HCM

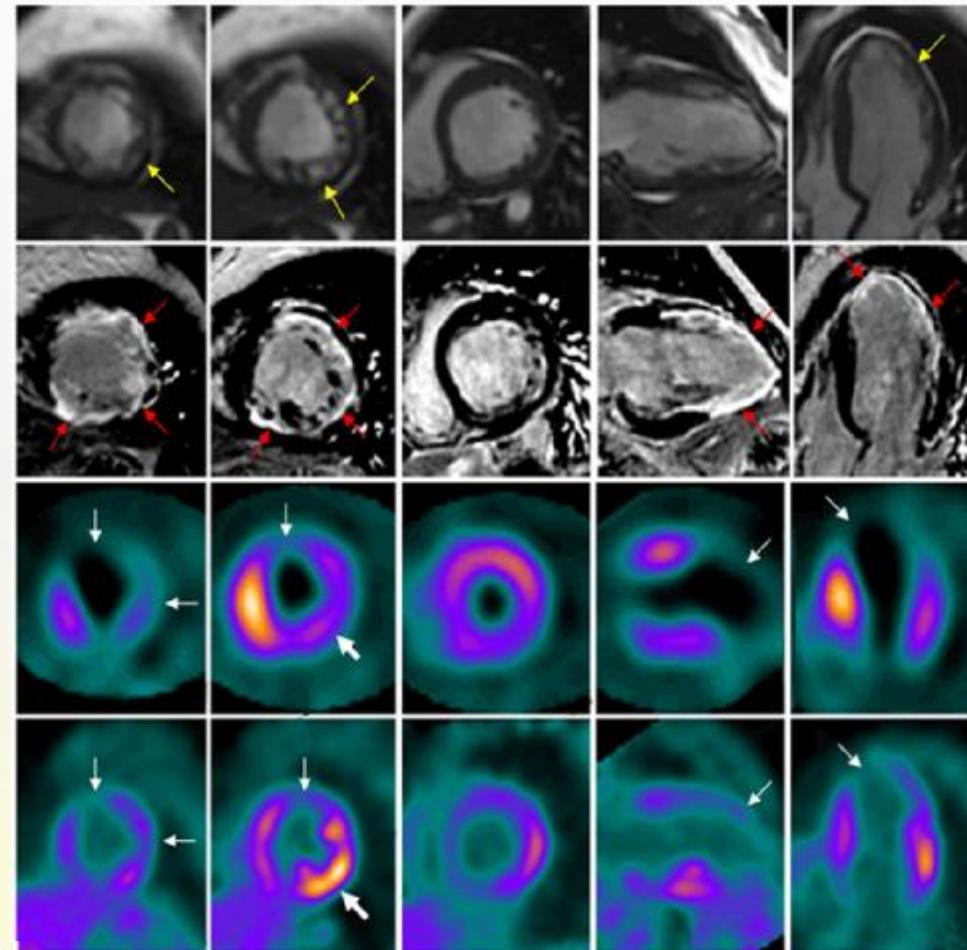

Perfusion and Metabolism Imaging in HCM with MI but Normal Coronary Arteries

LVEF: 45%
EDV: 173ml
ESV: 95ml

Isolated LV non-compaction

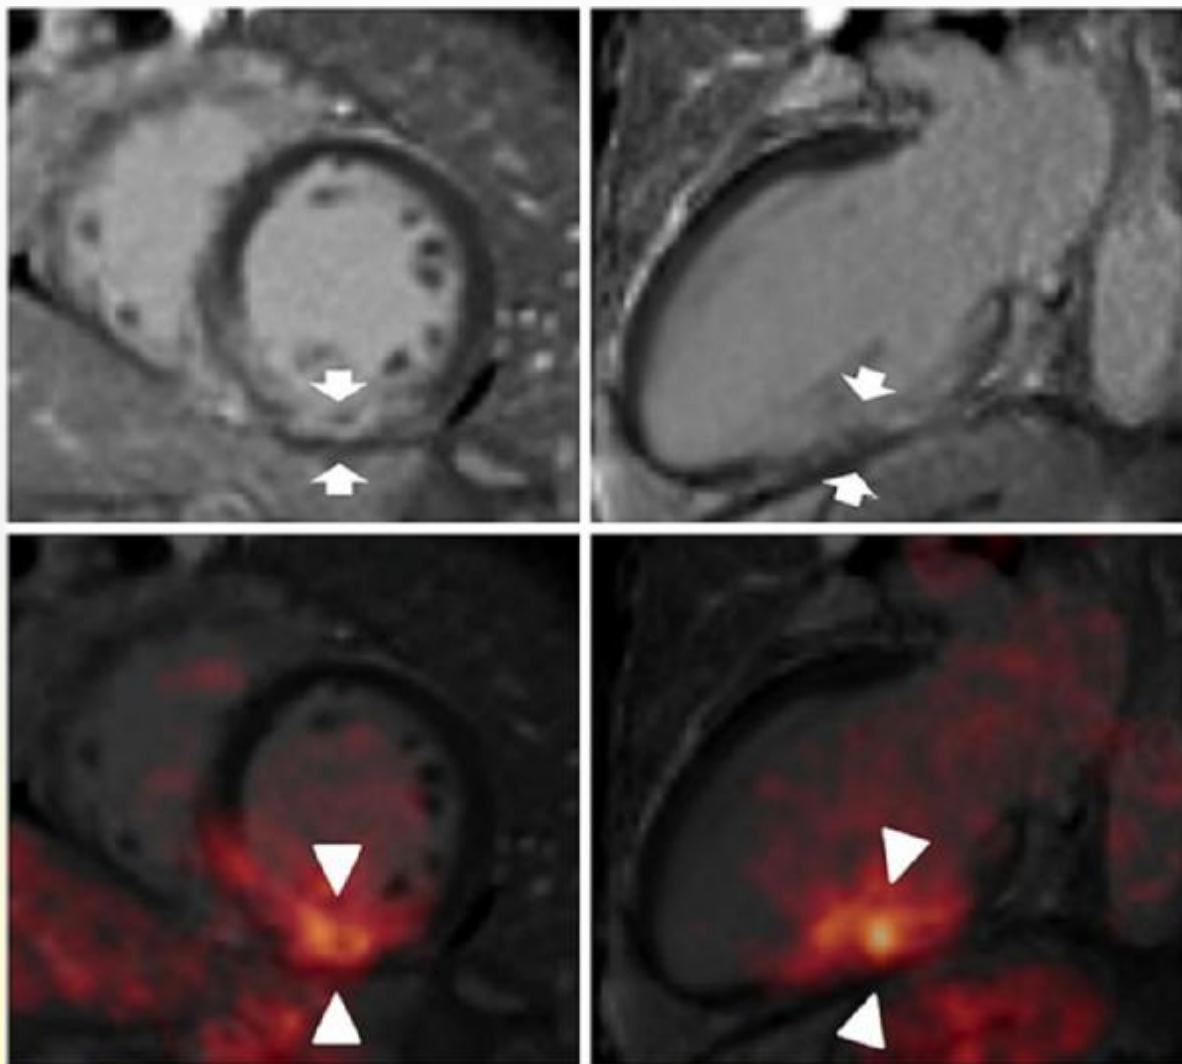

Female, 27-yrs-old, LVEF, 36%

Staging of cardiac sarcoidosis using resting myocardial perfusion scintigraphy (MPS), FDG-PET and LGE-CMR

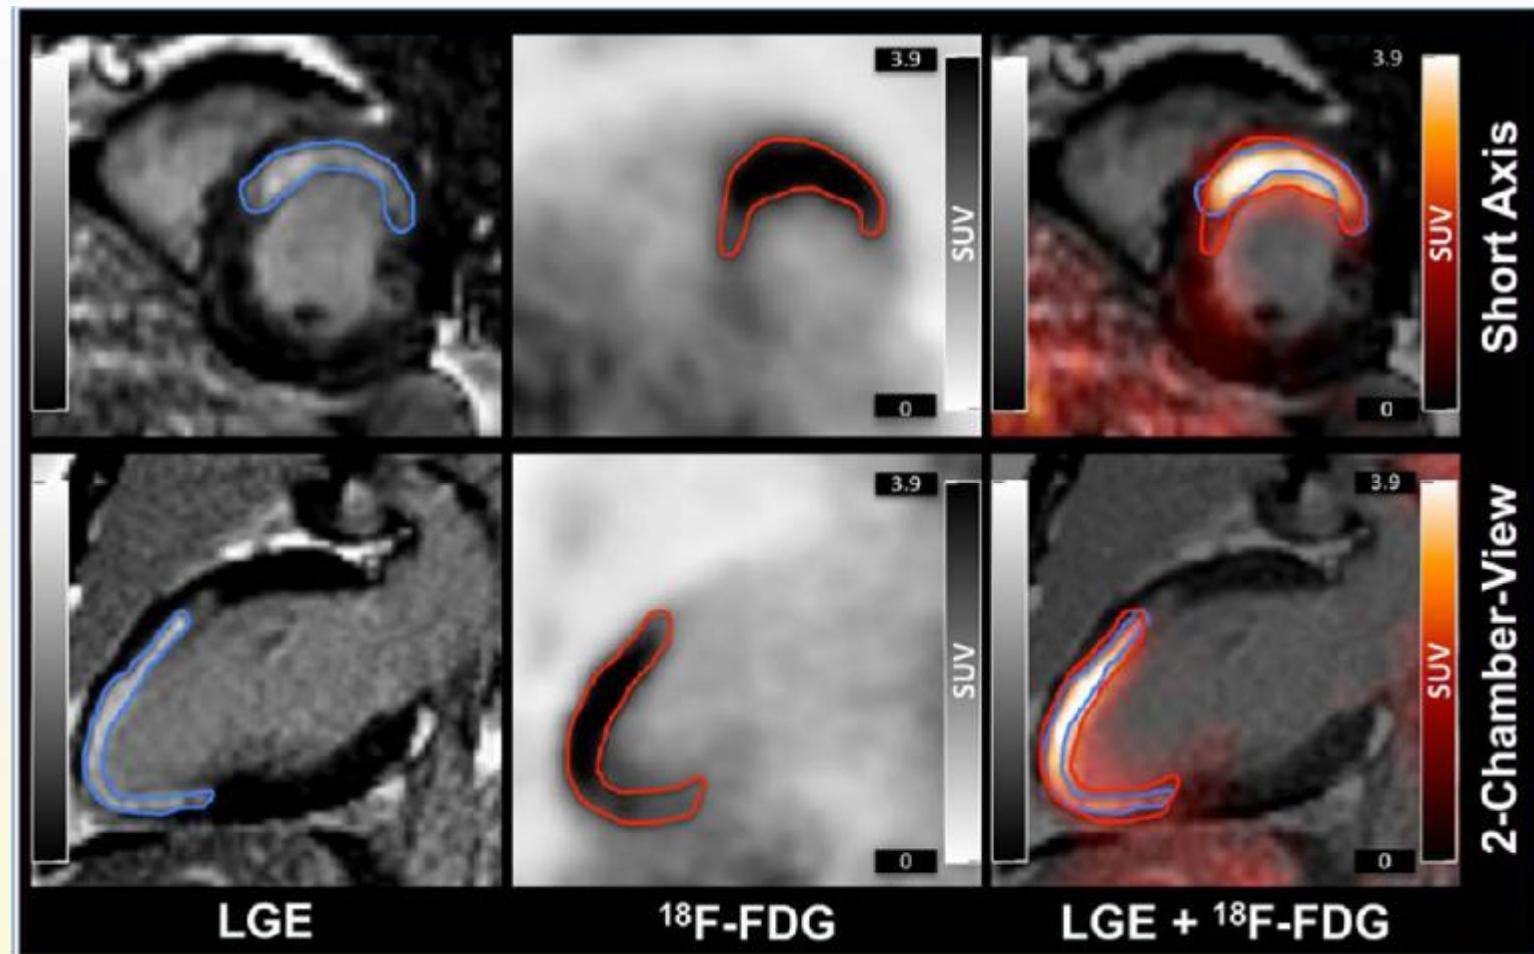

Stage	Rest MPS (Viability)	FDG-PET (Inflammation)	LGE CMR (Fibrosis)
Normal	Normal		
Early	Normal		
Progressive	Mild defect		
Peak active	Moderate defect		
Progressive myocardial impairment	Severe defect		
Fibrosis/ Burnt out	Severe defect		

Increased F-18 FDG uptake in myocardial infarction

Rischpler C, et al. J Nucl Med. 2013;54:402–15

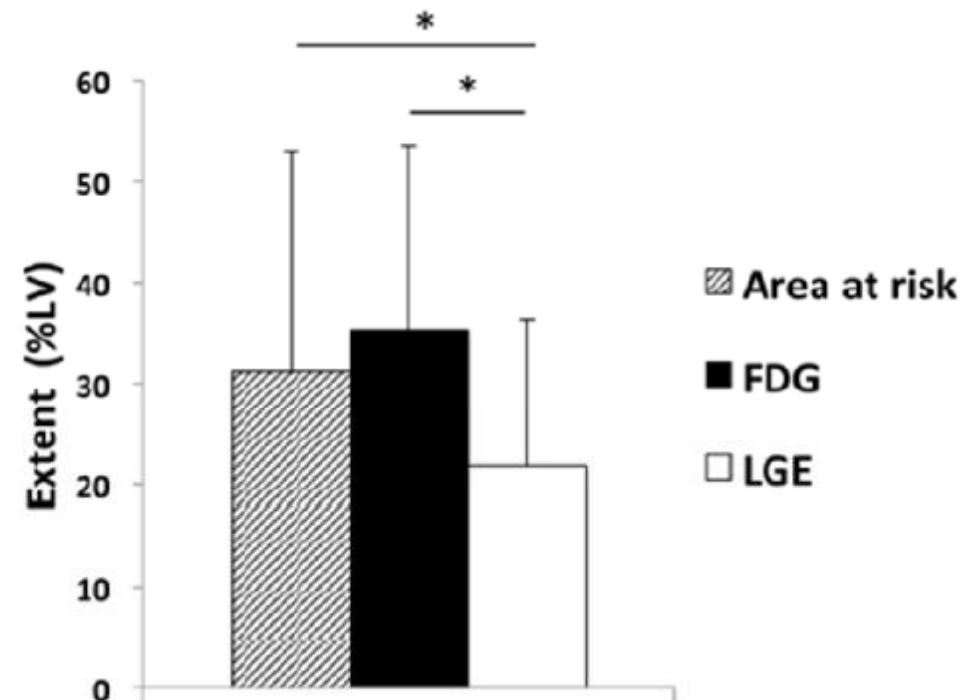

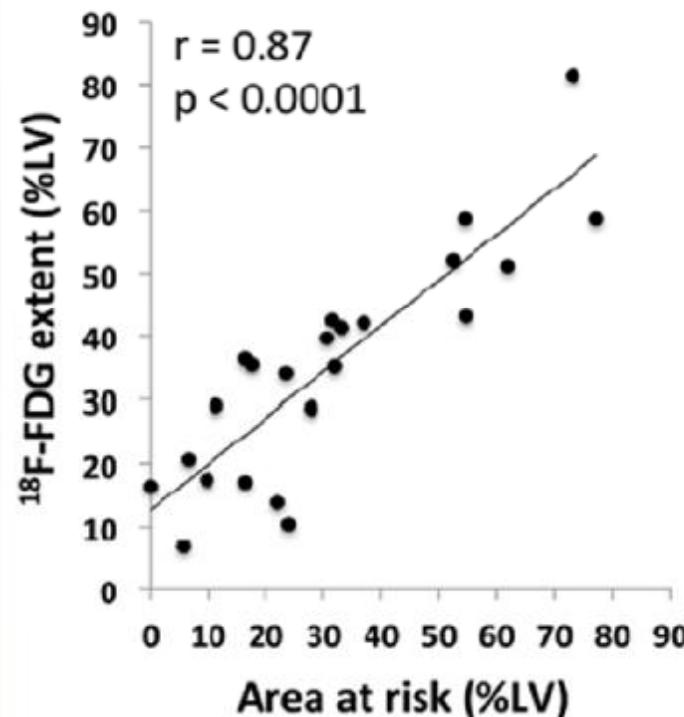

^{18}F -FDG PET/MRI of patient shortly after acute MI

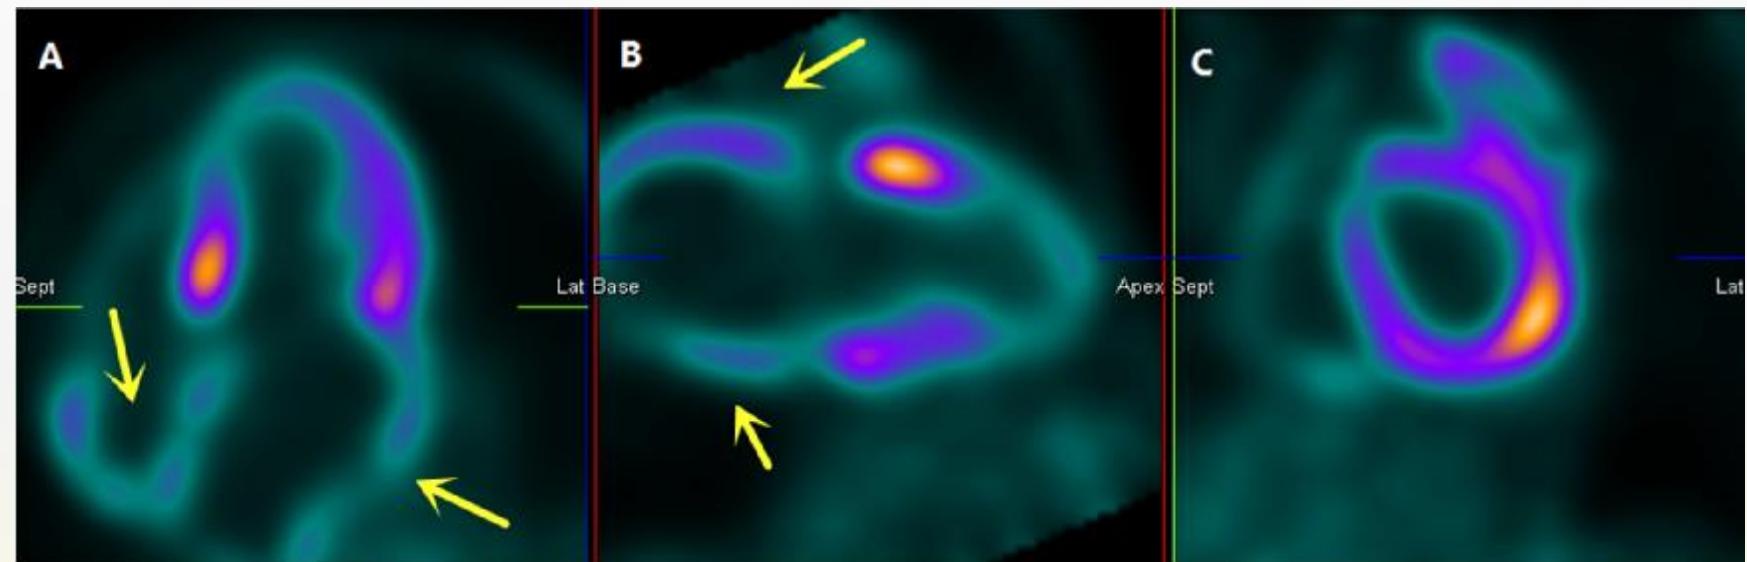

Rischpler et al. *Circ Cardiovasc Imaging*. 2016;9:e004316.

Correlation between quantitative F-18-FDG extent and area at risk

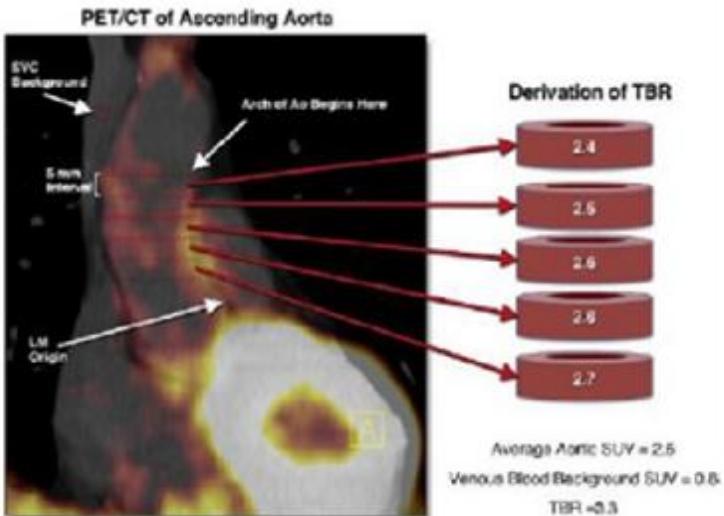

C

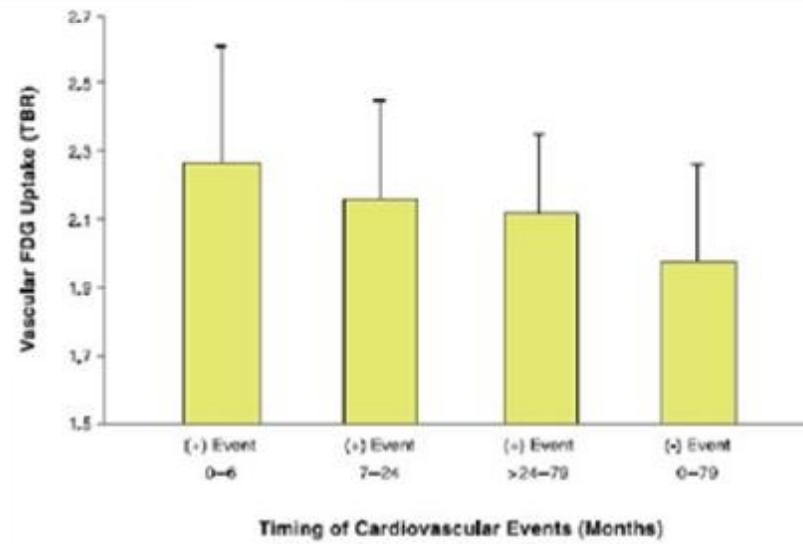

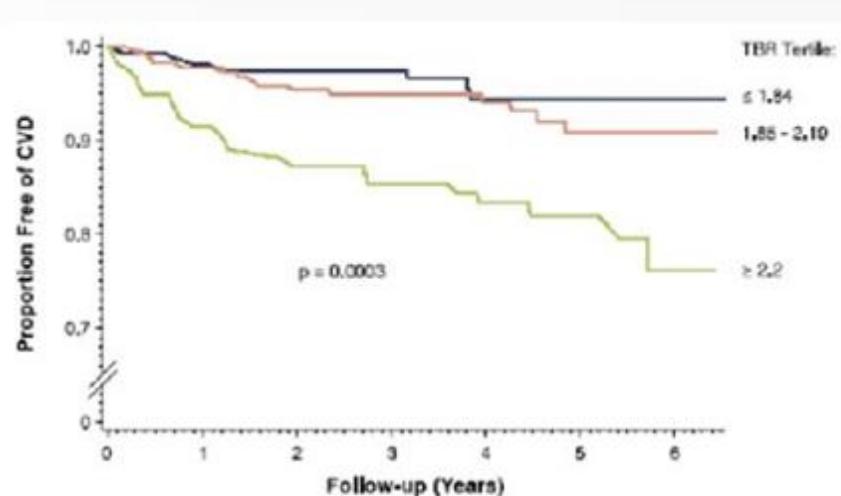

Atrial Uptake of FDG

A 63-year-old man, who had chest congestion for 6 months and a 10-year history of rheumatic valvular heart disease

Measuring methods

¹⁸F-fluoride PET for identification of ruptured and high-risk coronary atherosclerotic plaques

Study design:

- ③ patients with MI (n=40) and stable angina (n=40) underwent ¹⁸F-NaF and ¹⁸F-FDG PET-CT, and invasive coronary angiography.**
- ③ ¹⁸F-NaF uptake was compared with histology in carotid endarterectomy specimens from patients with symptomatic carotid disease, and with intravascular ultrasound in patients with stable angina.**
- ③ The primary endpoint was the comparison of ¹⁸F-fluoride tissue-to-background ratios of culprit and non-culprit coronary plaques of patients with acute MI.**

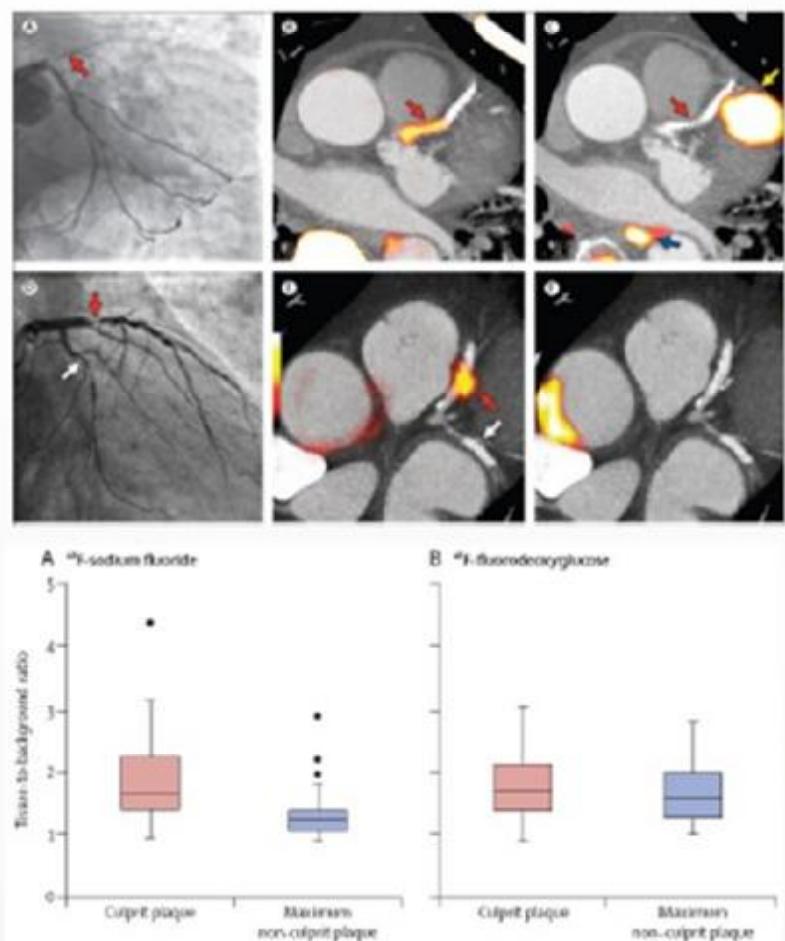

Joshi NV, et al. Lancet. 2014 Feb 22;383(9918):705-13.

PET/CT imaging of ^{18}F -fluoride and ^{18}F -FDG uptake in a patient with acute MI

Oshi N.V., et al. Lancet. 2014;383:705–713.

¹⁸F-Fluoride PET in Human

	¹⁸ F-fluoride positive plaques (n=15)	¹⁸ F-fluoride negative plaques (n=24)	p
Lumen			
Area (mm ²)	9.0 (5.7-13.5)	6.7 (4.7-9.7)	0.078

¹⁸F-fluoride PET for identification of ruptured and high-risk coronary atherosclerotic plaques

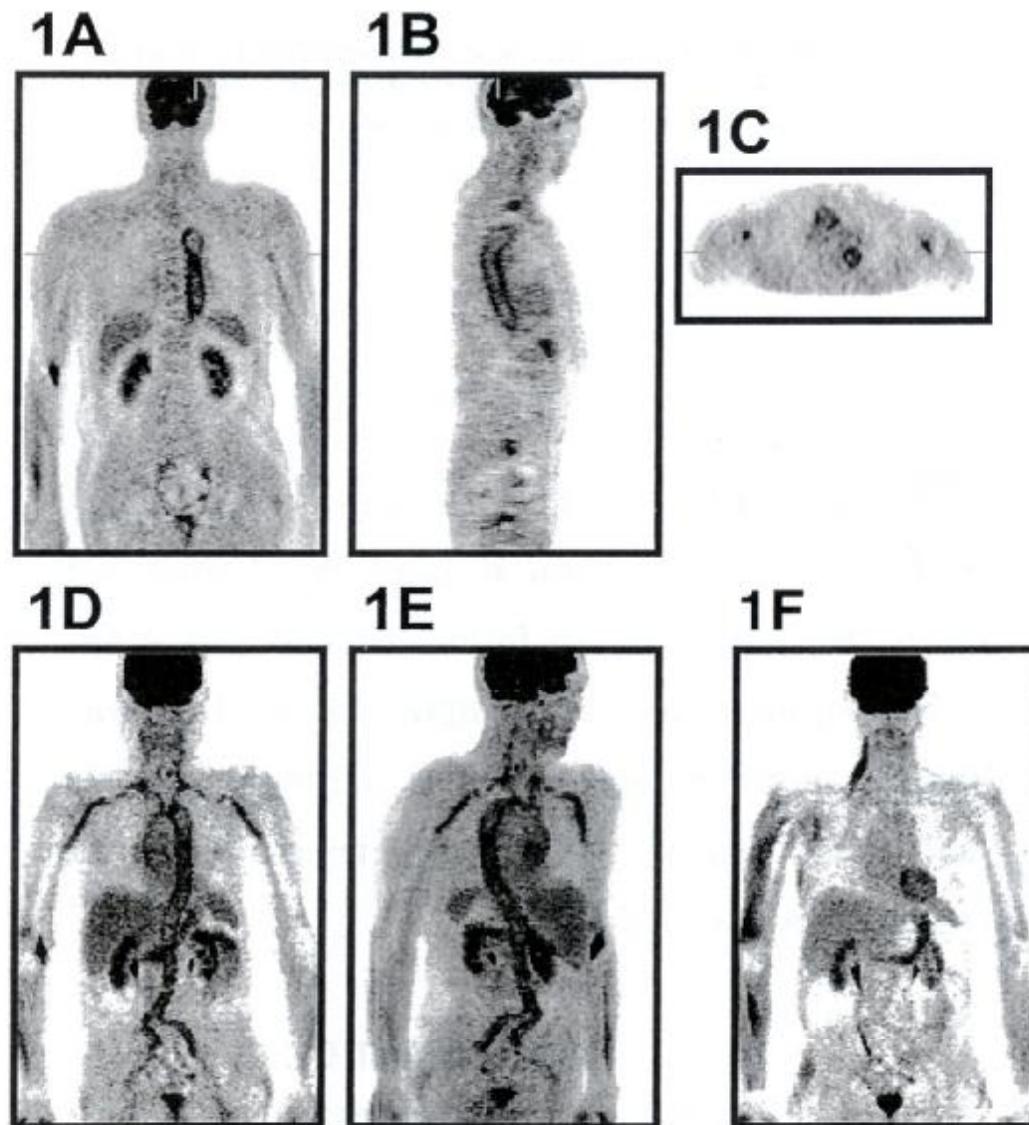

Interpretations:

- ③ **¹⁸F-NaF PET-CT is the first non-invasive imaging method to identify and localise ruptured and high-risk coronary plaque.**

CENTRAL ILLUSTRATION: Comparison Between ^{68}Ga -DOTATATE and [^{18}F]FDG Coronary PET Inflammation Imaging

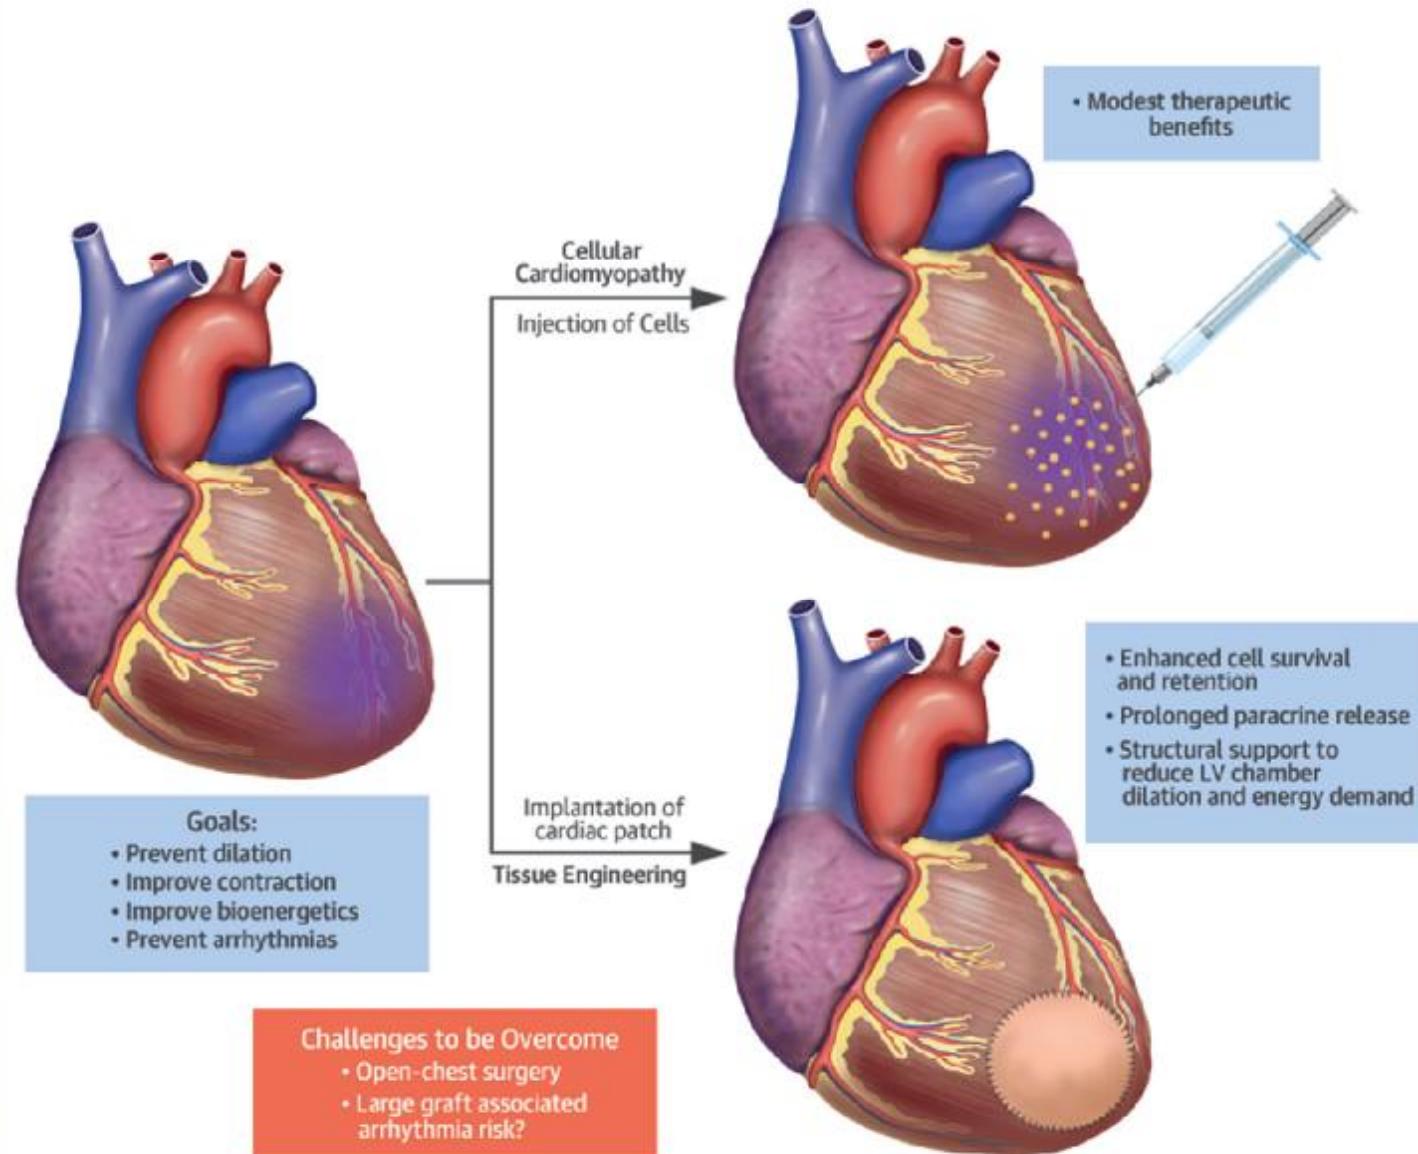

Tarkin, J.M. et al. J Am Coll Cardiol. 2017;69(14):1774-91.

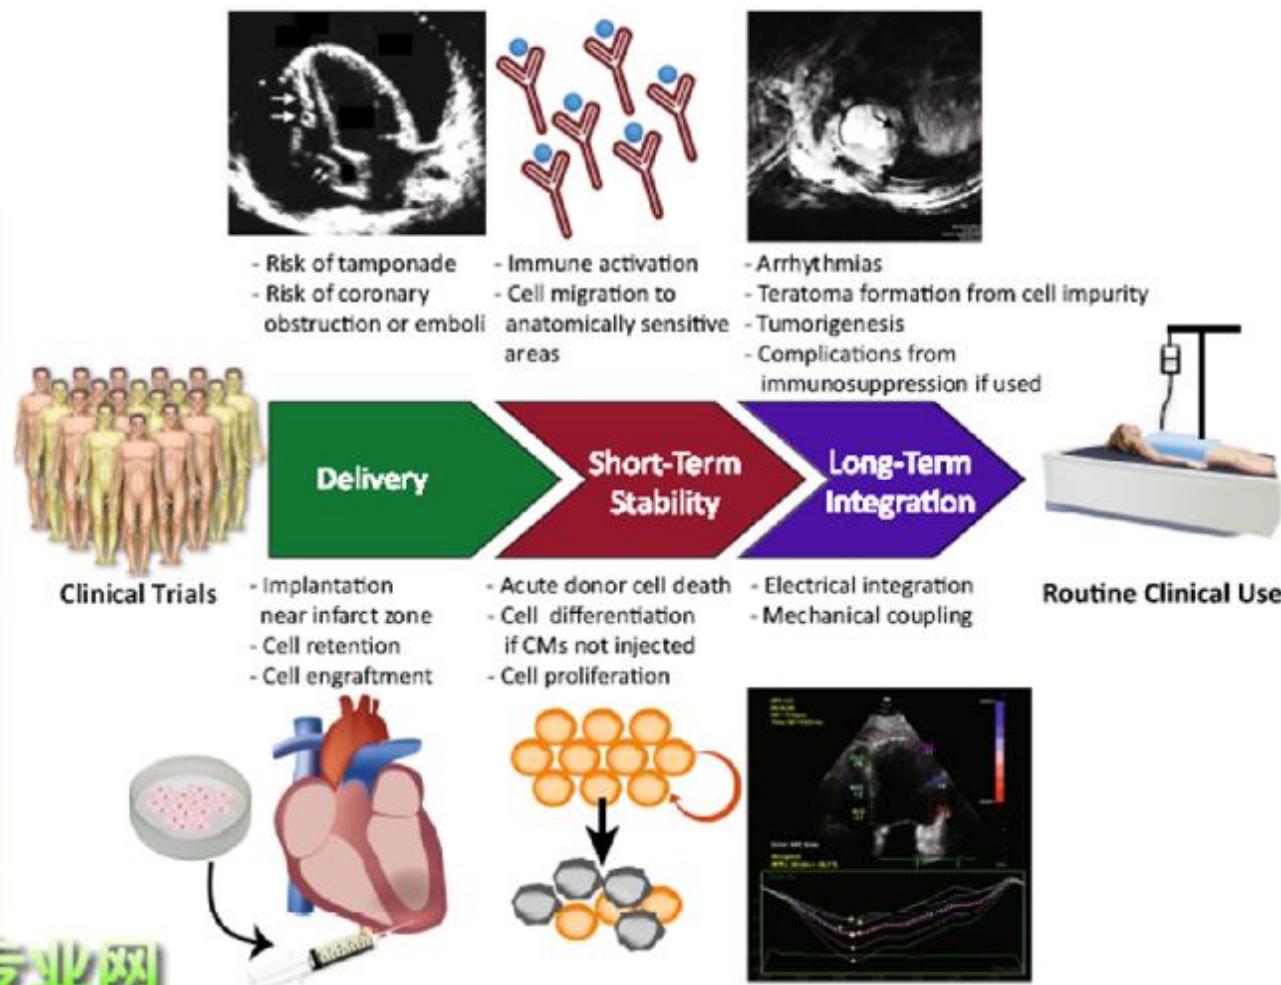

^{18}F -FDG-PET studies show increased ^{18}F -FDG uptake along the large vessel walls before, but not after, corticosteroid treatment. Pretreatment images with coronal, sagittal, and transaxial slices are shown in A, B, and C, respectively, and anterior view and right posterior oblique position are shown in D and E. F, Posttreatment control with anterior view.

Wenger; *Circulation* 2003;107:923

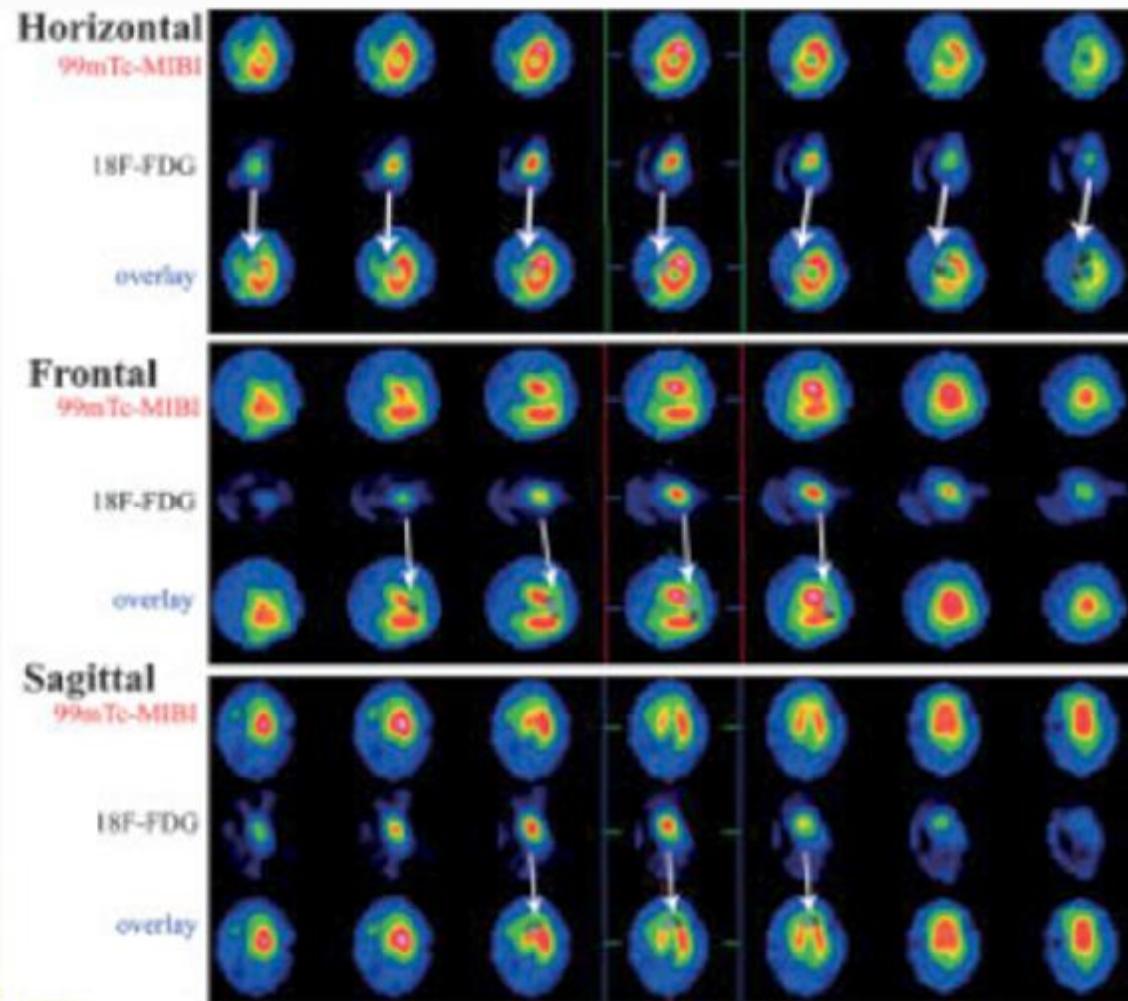

CENTRAL ILLUSTRATION Overview of Strategies to Overcome the Roadblocks in Cardiac Cell Therapy

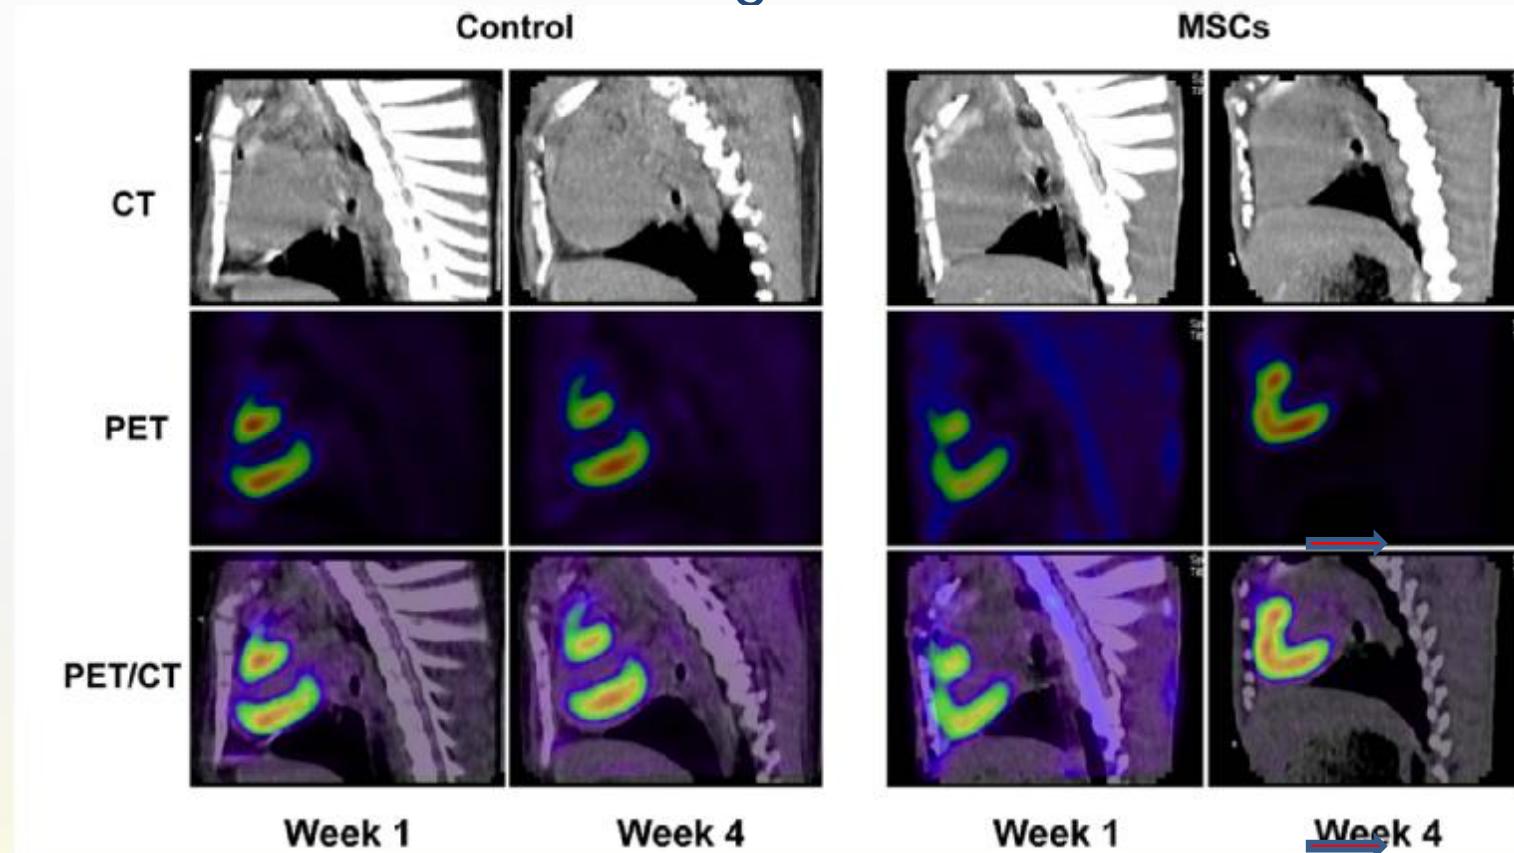

Multimodality imaging in stem cell clinical trials

Intram myocardial localization of F-18-FDG-labeled MNCs

FDG PET-CT images at week 1 and 4 in infarcted hearts receiving PBS versus MSCs

第三方评价: Treatment with autologous bone marrow-derived MSCs can also promote cardiomyocyte survival by regulating glucose metabolism via the mechanistic target of Rapamycin pathway following MI (Bartczak et al. Curr Opin Organ Transplant 2017, 22:86–96)

心血管影像与心血管病学的协作

- ② 为临床诊断提供支持
 - ③ 直接回答临床医师的问题
- ② 为疗效评价提供客观证据
- ② 与临床科室分享利益
 - ③ 创造利润
 - ③ 分享利润

拓展临床应用

- ② 针对临床病例，与临床科室沟通
- ② 针对临床问题，提供核医学解决方案
 - ③ 优势
 - ③ 不足
- ② 针对临床科研课题，应用核医学技术
 - ③ 从临床科研到临床应用
